

# TROESTER

EXCELLENCE IN EXTRUSION.

## THE BRAND-NEW COMPACT EXTRUDER

For the first time in the North American market TROESTER introduced their new Compact Extruder design at the NPE show in Chicago.

Please contact us to schedule a demonstration or to run trials (free of charge) at our lab in Ohio. We have the capability to run this machine with or without vacuum and can attach an optional gear pump.

# TROESTER

EXCELLENCE IN EXTRUSION.

Wire & Cable

Tire Components

Profiles & Hoses

Gaskets & Belts

This new compact extruder design is now available for regular cold-feed extruders, vacuum extruders as well as pin-type extruders. An exclusive feature is the separately driven feed roll. By using one of the four motors of the CMG system, along with it's own drive to control the feed roll, it can be used in either speed or torque mode.

- separately driven feed roll for tight control of infeed
- newly designed feed roll for longer service life and reduced maintenance

- reduced noise emission to meet strictest regulations
- easy installation as the machine is completely plumbed and wired

- clean set up that is easy to maintain in a clean environment
- reduced floor space requirement

TROESTER provides solutions to the following industries:  
TIRE, AUTOMOTIVE, PROFILE, TUBE & HOSE, WIRE & CABLE  
GASKETS & BELTS, MOLDING, SHEETING, ROOFING, ROLLERS, SPECIALTY

- single extruders
- coextrusion systems
- roller head systems
- single roll roller die systems
- extrusion die heads
- gear pump systems
- gear extruders type ROTOMEX
- preformers type SLUGMAX
- strainer; pelletizer; pork-chop heads
- calenders
- slab / strip feeders
- continuous curing systems
- cooling systems
- cutting / skiing systems
- winding / stacking systems
- custom designed / built systems
- control systems
- and much more.....
